DnaK Mix

#PF003-0.5-EX

For 500 µL Reaction

PUREfrex® is NOT included.

in vitro research use only Store at -80°C before opening

SHARP Kashiwa Building, 4F ۵ GeneFrontier Corporation 273-1 Kashiwa Kashiwa-shi www.genefrontier.com Chiba 277-0005 Japan

Kit components Store at -80°C before opening

DnaK Mix (Orange) 25 uL 100µM DnaK, 20µM DnaJ and 20µM GrpE in 30% glycerol buffer Store at -80°C*1

Dilution Buffer (Clear) 500 uL

30% glycerol buffer

Store at -20°C

Feb 2023

For storage at -80°C, the rest of solution should be frozen rapidly in liquid nitrogen or dry ice/ethanol. Divide into aliquots, if necessary, and avoid refreeze and thaw as much as possible.

Introduction

1. Overview

DnaK Mix is a newly developed supplement of PURE frex® to assist proper folding and solubility of your protein.

PURE frex® is a cell-free protein synthesis reagent but has no molecular chaperones (See next page).

When your protein of interest needs molecular chaperones for proper protein folding, DnaK Mix could be a solution for that.

DnaK Mix is constituted of highly purified DnaK, DnaJ and GrpE from E.coli with the optimized ratio.

DnaK known as Hsp70 has ATPase activity and is stimulated by co-chaperones, DnaJ and GrpE.

DnaJ facilitates the ATPase activity of DnaK and could bind to a hydrophobic region of protein.

GrpE stimulates ADP/ATP exchange rate of DnaK. DnaK Mix works very well with PURE frex® (#PF001-0.25 or #PF201-0.25) (and with DS supplement (#PF005-0.5)) in a single tube for protein synthesis reaction, which could lead to the preparation of your protein in proper folding with good solubility.

DnaK Mix is worked with PURE frex® (#PF001-0.25、

#PF201-0.25) or DS supplement (#PF005-0.5) in one tube.

For example, 20 µL of reaction is assembled as below.

1. Thaw Solution I by incubation at 30°C for 1 minute,

3. Mix Solution I, II, III and DnaK Mix by vortex and centrifuge briefly to collect each solution at the bottom. 4. Assemble the reaction mixture in a tube as follows. (Add the template DNA to 0.5-3 ng/µL per 1 kbp)

2. Thaw Solution II, III and DnaK Mix on ice.

Introduction

2. About PUREfrex®

PUREfrex® is a reconstituted cell-free protein synthesis kit which GeneFrontier has developed based on the PURE system technology. The PURE system is a cell-free protein synthesis system, which has originally developed by Professor Takuya Ueda at the University of Tokyo, and is consisted of only purified factors necessary for transcription, translation and energy regeneration (Ref. 1). The target protein is synthesized by adding the template DNA (or mRNA) to the reaction mixture. PURE frex® is consisted of only purified factors, therefore it enables to adjust the composition of the reaction mixture.

PURE frex® is raised in the purity by improving the preparation methods of ribosomes, tRNAs and all proteins in the reaction mixture compared with the original PURE system (Ref. 2). As the result, the contaminating lipopolysaccharide from E. coli is reduced below 0.1 EU per 1 µL of reaction and other contaminants, such as RNase and β -galactosidase, are also reduced.

In the PUREfrex[®], all proteins have no tags for purification or detection, therefore the target protein would be synthesized and purified by any tag.

Protocol

5. Incubate the tube at 37°C for 2-4 hours.

6. Analyze the synthesized product.

Note

DnaK Mix is developed for in vitro research use only. DnaK Mix should not be used for the therapy, diagnostic or administration to animals including human and should not be used as food or cosmetics etc.

To avoid the contamination of nuclease, nuclease-free-treated water, reagents and materials should be used. We also recommend wearing gloves and mask.

For information concerning commercial use of DnaK Mix, please contact GeneFrontier (purefrex@genefrontier.com).
